Probability

Definition 1.0.1 ► Discrete Probability Model

Let Ω be a set , $|\Omega| < \infty$. $\mathcal{Q} = \varphi(\Omega)$ the collection of all subsets of Ω .
 $P : \varphi(\Omega) \rightarrow [0, 1]$ a function . If

1. $P(\Omega) = 1$.

2. $P(A \cup B) = P(A) + P(B)$ for all $A, B \in \varphi(\Omega)$, $A \cap B = \emptyset$.

Then we call $(\Omega, \mathcal{Q}, P)$ a
